## Morningstar Rating™ ★★★★★

The 4 star overall Morningstar Rating™ is for the period ended 6/30/2025 among 105 funds in the Short Government category. The fund's overall Morningstar Rating measures risk-adjusted returns and is derived from a weighted average of the performance figures associated with its 3-, 5- and 10-year (if applicable) rating metrics among 90, 87, and 79 investments, respectively. Share classes may vary. See Morningstar disclosure for more information.

Distribution Rate %	Class A	Class I	Effective Rate %	Class A	Class I
Net Asset Value	3.23	3.45	Net Asset Value	3.28	3.51
Max Offering Price	3.17	n/a	Max Offering Price	3.21	n/a

Distribution Rate @ NAV and Effective Rate @ NAV are for the period ended 6/30/2025 and do not reflect the deduction of the maximum sales load of 2.50%. If reflected, the sales load would reduce the performance quoted.

BofA/Merrill Lynch 1-3 Year Treasury Index is an unmanaged index that tracks the performance of the direct sovereign debt of the US Government having a maturity of at least one year and less than three years. It is not possible to invest directly in an unmanaged index.

Distribution Rate is an annualized rate of dividend distributions for shareholders taking dividends in cash based on actual dividend distributions and actual number of days in the distribution period.

Effective Rate is an annualized rate of dividend distributions for shareholders reinvesting dividends based on actual dividend distributions and actual number of days in the distribution period.

Yield to Maturity (YTM) is expressed as an annual rate. A bond's YTM is the rate of return anticipated if one assumes the bond is held until its maturity date and all the coupons paid by the bond are reinvested at the same rate of return as the coupons. The calculation takes into account the current market price, par value, coupon interest rate and time to maturity. The YTM of a bond fund is the market-weighted average of the YTM's of all the bonds in the portfolio.

Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in US Agency Mortgage Backed Securities include additional risks that investors should be aware of such as prepayment risk, extension risk, and possible illiquidity.

Morningstar Rating: For each fund with at least a 3-year history, Morningstar calculates a risk-adjusted return measure that accounts for variation in a fund's monthly performance (excluding sales charges and including fees and expenses versus all funds in the Morningstar category), placing more emphasis on downward variations and rewarding consistent performance. These ratings change monthly. The top 10% of funds in each category receive a Morningstar Rating™ of 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. (Each share class is counted as a fraction of one fund and rated separately.) Past performance does not guarantee future results. The information contained herein: (1) is proprietary to Morningstar and/or its content providers; (2) may not be copied or distributed and (3) is not warranted to be accurate, complete or timely. Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information. In each Morningstar Category, the 10% of funds with the lowest measured risk are described as Low Risk, the next 22.5% Below Average, the middle 35% Average, the next 22.5% Above Average, and the top 10% High.
